

PETUNJUK SETTING FASTCGI KE SOCKET

Edit file <u>www.conf</u> yang berada di direktori /etc/php-fpm.d
 Sebelum melakukan edit file tsb maka lakukan backup terlebih dahulu

```
# Backup
cp /etc/php-fpm.d/www.conf /etc/php-fpm.d/www.conf.bcp
# Edit File
nano /etc/php-fpm.d/www.conf
```

- Ubah listen

```
listen = /run/php-fpm/www.sock
```

Hilangkan comment (;)

```
listen.owner = apache
listen.group = apache
listen.mode = 0660
```

2. Edit file php.conf yang berada di direktori /etc/httpd/conf.d

```
# Backup
cp /etc/httpd/conf.d/php.conf /etc/httpd/conf.d/php.conf.bcp
# Edit File
nano /etc/httpd/conf.d/php.conf
```

- Cari <FilesMatch \.php\$>
- Sesuaikan script seperti di bawah ini

```
<Proxy "unix:/run/php-fpm/www.sock|fcgi://php-fpm">
    ProxySet disablereuse=off
</Proxy>

<FilesMatch \.php$>
    SetHandler "proxy:fcgi://php-fpm"
</FilesMatch>
```

3. Lakukan restart php-fpm dan httpd

```
systemctl restart php-fpm
systemctl restart httpd
```

4. Buka web browser

Akses: http://localhost/webservice/info.php Sesuaikan localhost denga IP server masing"
